

Problem Wk.8.4.3: Controller gains

Use your system functions from Homework 2 to find the best gain (the one with smallest dominant pole) k_c for the head controller, given the following values for the sensor gain k_s .

Use the following values for the other parameters:

- $k_m = 250$
- $k_b = 0.48$
- $r_m = 4.5$
- $T = 0.02$

k_s	Mag dominant pole	k_c
